KATE Innovations

KATE Innovations provides efficient software for using property-data to value commercial real estate. By structuring, validating and using data, we translate the needs of real estate advisors into innovative solutions in the most efficient way.

The module-based software can provide a one-stopshop to value any property. By connecting internal and external datam KATE helps you to turn your data into real value. In the module Compview you get an overview of all comparables (internal and external) and valuations on a single map. This will provide you an easy insight in all of your data. The Mobile Inspection Tool (MIT) synchronized all information from an inspection, including photo's, directly into your system. With one push on the button the reporting tool generates your custom report, custom offer or datafile to send to your client or directly to a bank (XBRL). Get ready for the future and find out what KATE can do for you.
